EXECUTIVE SUMMARY

1.0 Project Name and location

The Proposed Project i.e. M/s Ambey Industries is a Secondary Metallurgical Process based industry. The plant is located at G.T. Road, Sirhind side, backside Modern Steel Ltd, Mandi Gobindgarh, Tehsil- Amluh, District- Fatehgarh Sahib, Punjab

2.0 Products and capacities

It is proposed to install an Induction furnace of capacity 25 TPH, a Ladle Refining Furnace of 25 TPH capacity, rolling mill and a Concast Machine. The capacity of the unit will be 1,31,250TPA of Steel Ingots/billets, HR Flats, Strips.

The production details will be as under:

PRODUCTS	
Product Name	Capacity (TPA)
Steel Ingots/billets, HR Flats, Strips	1,31,250

3.0 Land Area

The total plot area is about 5.4203 acres or 21761.84m², out of which 2.9960 acres has been purchased by the unit and 2.4243 of land area has been taken on rent/lease from M/s. K.L Steel Industries for installation of the unit.

3.1 Raw Material Requirement

RAW MATERIAL	
Description	Capacity (TPA)
MS Scrap & Ferro alloys	1,43,062
Source & Transportation	Local & international markets and transport through covered trucks

3.2 Water Requirement

Water consumption for the unit will be making up water for cooling and for domestic purpose. Water requirement will be met through existing tube well. The detail of water requirement is given below:-

Water Requirement

DESCRIPTION	TOTAL REQUIREMENT
Domestic	3.5 KLD
Cooling (makeup water)	25 KLD
Total	28.5 KLD

3.3 Power Requirement

The Power Requirement will be met by sourcing the power from Punjab State Power Corporation limited from nearby Sub-station. The detail of power requirement is given below:-

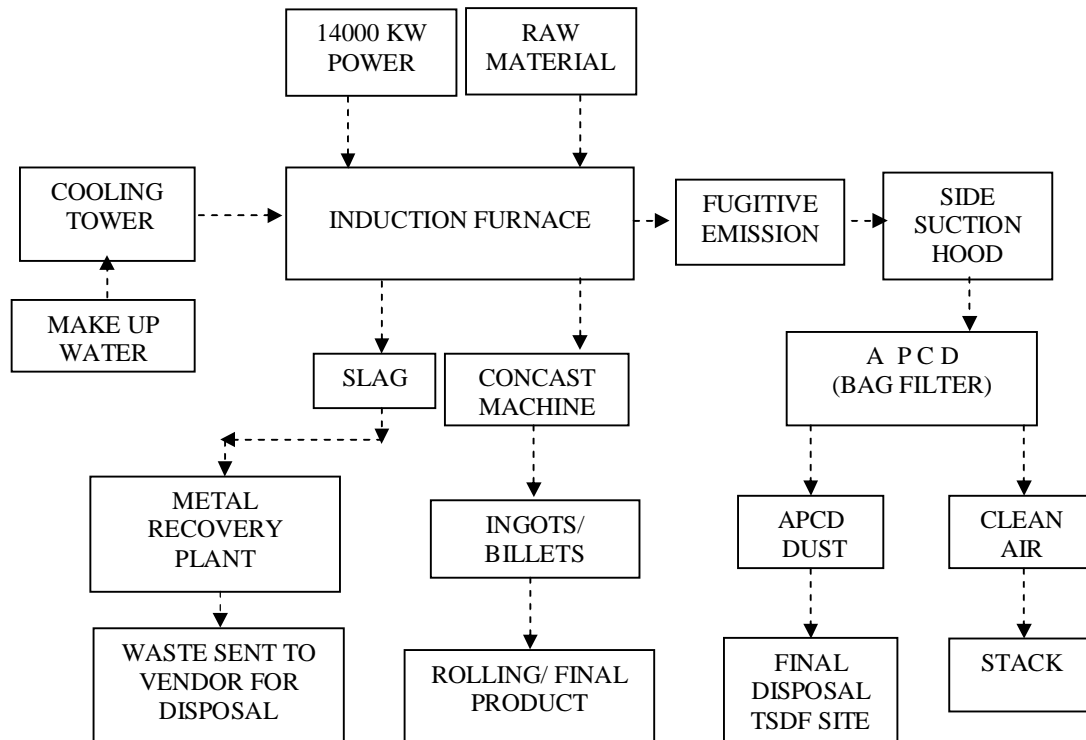

Source of Electricity	Punjab State Power Corporation Limited (P.S.P.C.L.)
Total Load (KW)	Total Load
	14000

3.4 Manpower Requirement

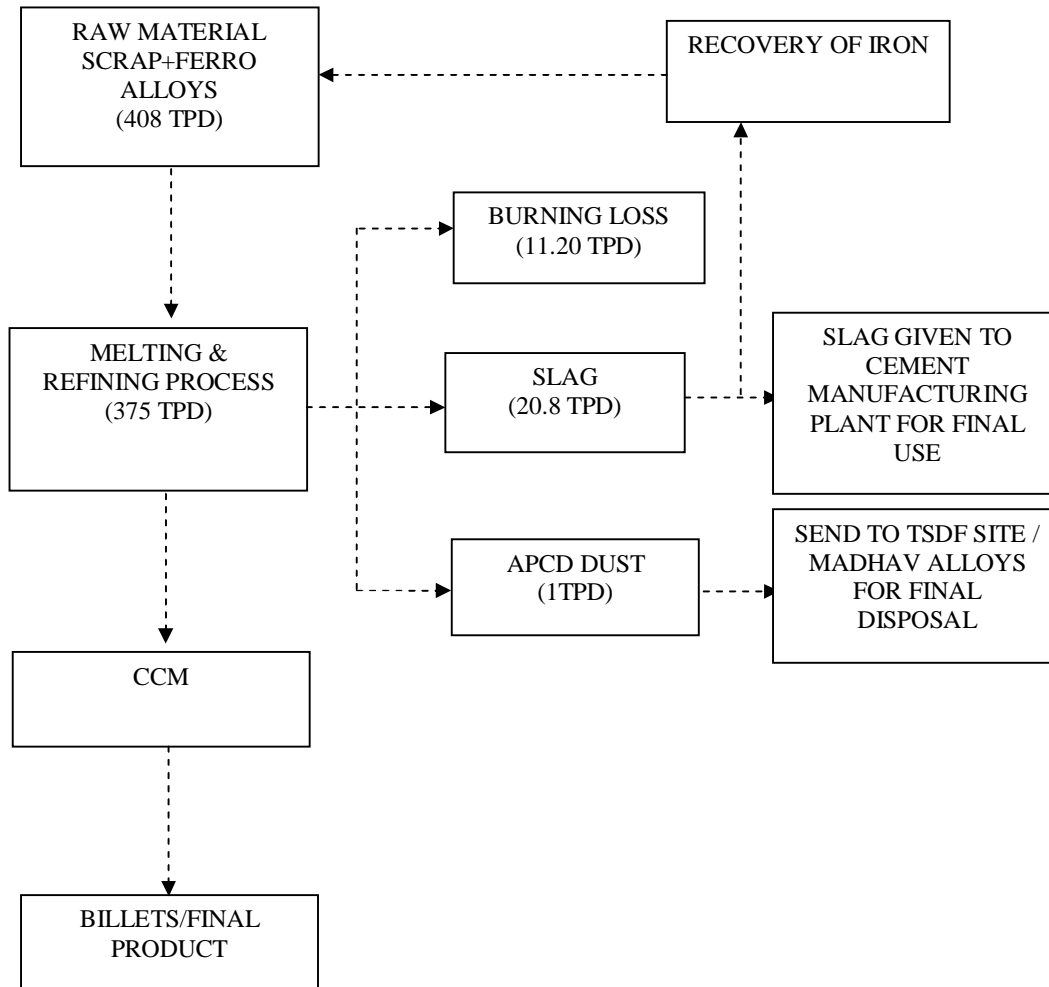

The proposed project shall generate direct employment for 75 persons.

4.0 Process Description/Material Balance

Flow Chart of Manufacturing Process

Material Balance

5.0 Description of Mitigation Measures

The purpose of mitigation measures is to avoid, reduce or minimize unwanted impacts on the environment. To minimize & control the emission from I.F, the exhaust after suction through side suction hood will be passed through spark arrestor, air cooling and finally bag filters before its discharge to atmosphere. DG set will be fitted with a canopy and adequate stack to take care of noise and particulate & gaseous emission. About 20.8 TPD of slag which is not a H.W will be generated and the same after recovering of iron will be supplied to manufacturers of cement concrete blocks, pavers & tiles under proper agreement. Treated waste water from septic tank will be used for plantation within the industrial premises. The industry will regularly operate and maintain its APCD and ensuring that the emissions are adequately collected and concentration of air pollutants in its emissions conforms to the emission standards laid down by the board.

6.0 Cost Details

The total cost of the project has been estimated as Rs. 33.7994 Cr. Total EMP cost is Rs. 1.08 Crore and recurring cost is Rs 9.4 Lakhs.

7.0 Site Details

M/s Ambey Industries is situated at G.T. Road, Sirhind Side, backside Modern Steel Ltd Mandi Gobindgarh, Tehsil- Amluh, District- Fatehgarh Sahib, Punjab having its global coordinates as Latitude 30°39'16.85"N, 30°39'19.29"N, 30°39'19.10"N, 30°39'20.84"N & Longitude 76°19'5.30"E, 76°19'2.30"E, 76°19'1.95"E, 76°19'0.20"E. Mandigobindgarh is the nearest city) and also the railway station (about 2.5 Km). Nearest airport is Chandigarh which is at 45 km from site. No National Parks/ Wildlife Sanctuaries/ Biosphere Reserves/ Reserved Forests exist within 5 km radius of project site.

8.0 Baseline Environmental Data and their impacts

Various Environmental factors as existing in the study area which are liable to be affected by the activities have been assessed both quantitatively and qualitatively. Baseline environmental data generation of study area was carried out during the period October, 2018 to January, 2019.

8.1 Ambient Air Quality

The PM_{2.5}, PM₁₀, SO₂, NO₂, CO levels were monitored at eight locations in the study area for four months (October, 2018 to January, 2019). The P98 levels of criteria pollutants are as follows: PM_{2.5} is 52.5µg/m³, PM₁₀ is 94.1µg/m³, SO₂ is 14.2µg/m³, NO₂ is 41.3µg/m³ and CO is

0.65mg/ m³. The baseline air quality level is within the National Ambient Air Quality Standards prescribed for industrial, residential, rural & other area and also satisfies the air quality index (AQI) w.r.t. health bracket for all the monitoring. **(Standards are 60, 100, 80, 80µg/m³ and 4.0mg/m³ for PM_{2.5}, PM₁₀, SO₂, NO_x and CO respectively)**. Due to better pollution abatement facilities, proposed expansion will have insignificant impact on existing air quality.

8.2 Water Quality:

Eight groundwater samples and one surface water sample were collected from the study area for physical, chemical and bacteriological analysis. The groundwater quality of the study is satisfactory. No metallic or bacterial contamination was found in the water quality. But bacterial contamination is found in surface water.

8.3 Noise Environment

Ambient noise levels were monitored at 8 locations in the study area. Noise levels in the study vary from 45.3 dB (A) to 69.1 dB (A) in day time and 34.2 dB (A) to 54.2 dB (A) at night. The highest levels were observed at Project Site. The baseline noise levels are well within the National Standards of 75 dB (A) for day time & 70 dB (A) for night time for Industrial Area. Proposed expansion will have less impact than existing one due to better pollution control facility.

8.4 Soil Quality

Eight soil samples were collected from the study area and analyzed. The texture of soil is sandy loam. The organic matter, nitrogen, potassium and phosphorus content of the soil are moderate. The pH of all the soil samples is within the acceptable range. No impact on soil will be there for proposed plant.

8.5 Ecological environment

Ecological data has been collected through secondary sources and by site visits. The tree species kikar, Jamun, Peepal and Mango etc are the dominant plant species of the study area. Mongoose, porcupine, jungle cat, cobra, krait, snakes, hare, pigeon and variety of birds are the common animals of the study area. No endangered species of plants and animals are found in the study area, so no impact on ecological environment.

8.6 Sensitive Ecosystem:

Within the study area, no plant or animal species were found to be on the endangered list. No ecologically sensitive area like biosphere reserve, tiger reserve, and migratory corridors of wild elephant, wetland, national park and wildlife sanctuary are present in the study area. Agriculture and industrial workers dominate the occupational structure of the study area. Several induction furnaces, rolling mills, ferroalloy plants, brick kilns, and other small units are present in the study area.

8.7 Socioeconomic Condition:

Socioeconomic status has been studied through secondary sources and by site visits. The social requirements such as Drinking water, Promotion of Educational facilities and Medical facilities to the villagers (especially Senior Citizens and infants or pregnant ladies) have been identified. Community centers, recreation facilities etc will be developed as part of social responsibility.

9.0 Possible Hazards & Risks from Secondary Metallurgical Industries

The various process operations, which are having potentially high risk to human exposure and which have high levels of attention area identified in the following table.

Table: Possible Risk

S.No.	Plant Area	Possible Deviation from normal operation	Likely Causes	Consequences
1	Furnace	Re-circulating and cooling water coming in contact with the molten iron or slag.	Leakage of water from the walls Spurting of metal/slag.	Explosion under extreme cases.
		Presence of Oil & Grease and other Impurities in raw materials.	Fire	Sudden catches fire & flames
2	High Power Transformer	Oil temperature being very high.	Varying room Temperatures	Sudden flashing of fire or bursting.
3	High Tension Electrical Installation	Heavy sparking at the pot heads and the joints.	Loose joints, cable cut, burning of fuses, short circuits etc.	Sparks in the beginning, devastating fire if neglected.

10.0 Emergency Plan

Emergency planning is primary for the protection of plant personnel and people in nearby areas and the environment that could be affected by unplanned hazardous events. Furnaces are associated with fire and electrical hazard due to sudden generation of pressure or temperature that leads to damage, injury and death. Temperature and pressure are closely related, and when flammable or combustible mixture is present in process equipment that leads to worst consequences. Thus, an engineering evaluation will be done for worst-case scenario.

11.0 CER Activities (Corporate Environmental Responsibility)

The company has earmarked Rs. 10.0 lakhs towards Corporate Environmental Responsibility for undertaking the environmental activities as defined in CER circular issued by MoEF & CC and the public hearing issues which will be detailed in final EIA report.

12.0 Environment Monitoring Plan

Regular monitoring of all significant environmental parameters is essential to check the compliance status vis-à-vis the environmental laws and regulation. The frequency of the monitoring will be as follows:

- The ambient Air quality shall be monitored at project site and two upward and downstream locations once every quarter for PM_{2.5}, PM₁₀, NO_x & SO₂, and CO levels during the Construction Phase and Operational Phase.
- The Ambient Noise Levels, Water Quality, Effluent etc. shall also be monitored once every six months or as per EC conditions.

13.0 Environment Management Cell (EMC)

A duly constituted EMC comprises the following:

1. Project Promoter
2. Process Incharge
3. Environment Consultant
